Task flow

initialization

- create project folder
- `npm init`
  - answer the questions
  - this creates the `package.json` file
- `eslint --init`
  - answer the questions
- `npm install express`
  - add express as dependency to the package
  - create the `node_modules` folder

progamming Server

Create index.js and other files necessary.

start Server

```
node index
```

Or if you added start-script to package.json

```
npm start
```
